

**Reduce Your Footprint – without changing your life...**  
*The Conservepump™ Garden Smartbox let's you efficiently water your garden using your rainwater first!*

The included soil moisture sensor is the key to it's smart operation

**Your Smartbox lets you create the most sophisticated rain-watering system possible. Just hook it up to your existing rain barrel and irrigation.**

Do you want your garden to be watered properly while you go away on holidays without wasting rainwater or running out of water? The Garden Smartbox's state of the art controller measures the soil's moisture and waters only when it's needed! And it will automatically switch to house water when your rain barrel is empty!

**Conservepump™ Garden Smartbox                      \$850**

Smartbox includes inlet strainer, pump, controller, daylight sensor, battery, charger, and make-up water valve. Solar power option, add \$150. Works with all rain barrels, standard plumbing parts, and conventional drip/micro irrigation components. (see [www.conservepump.com](http://www.conservepump.com) for installation examples)
